Experience

Galleri5 | *Backend Engineer* Nov. 2025 – Present | Bengaluru

- **Tech lead** owning the **end-to-end architecture** of a creator-marketing platform, including production and releases; scaled it from zero to **400+ creators** across 25 states, **490+ campaign submissions**, **420M+ content views** and **Rs. 4.3Cr+ in creator payouts**.
- Built the **payments layer**: idempotent order creation, **Cashfree payouts** with in-app KYC, signed-webhook verification, per-transfer structured logging (transfer ID, UTR, attempt) and **reconciliation jobs**, eliminating duplicate charges and missed events.
- Designed fine-grained **RBAC** and **JWT**-based auth across 3 backend services, and led migration to **Docker** on cloud with hardened **CI/CD** (automated tests, linters, formatters).
- Built a reliability/**observability** layer with structured logging and Slack-based error alerting, cutting mean detection time for production failures from **hours to minutes**; drove root-cause analysis on production incidents.
- Mentor **2 engineers** and define API, schema and idempotency standards across **3 backend services**; review **10–20 PRs/week**, catching auth gaps, race conditions and missing idempotency keys before release.

Timepass | *Backend Engineer* May 2024 – Oct. 2025

- Designed normalized **PostgreSQL** schemas and REST APIs sustaining **sub-100ms queries** under concurrent load; eliminated **N+1** access patterns and added **Redis caching** with dynamic invalidation to cut DB load and tail latency at peak.
- Built a **priority-based Celery multi-queue** to isolate latency-sensitive tasks from bulk background work during peak traffic.
- Built a **real-time voice/video** session backend on **Agora** (RTC/RTM token generation, balance validation, MQTT-based token renewal), handling the full media session lifecycle.
- Migrated deploys from AWS Elastic Beanstalk to **ECS (Fargate)** with blue-green releases via CodeDeploy, achieving **zero-downtime** releases and **70%** faster deploys.
- Owned a cross-platform in-app payment system (Google Play Billing + Apple In-App Purchase) processing **50K+ daily transactions** with automated renewals, failure recovery and refunds; instrumented Grafana + New Relic, improving system reliability by **40%**.

Timepass | *Backend Engineering Intern* Dec. 2023 – May 2024

- Integrated AWS Secrets Manager, S3, and Rekognition for secrets management and image analysis; automated lint, tests, and coverage via GitHub Actions.

Projects

Container Runtime from Scratch | *Go, Linux Namespaces, Cgroups* container-runtime

- Built a minimal Docker-like container runtime in Go using Linux **namespaces, cgroups**, and **chroot** to isolate the process tree, filesystem, and hostname.
- Ran the containerized app as PID 1 in an isolated root filesystem and enforced resource limits (PID cap, memory) via cgroups.

Qwen-Image-Edit LoRA Fine-Tuning | *Python, PyTorch, DiffSynth-Studio* qwen-image-edit-lora

- Built a two-stage **LoRA fine-tuning** pipeline for **Qwen-Image-Edit-2509** performing identity-preserving person replacement while retaining pose, lighting, and scene.
- Optimized training under limited GPU memory with **FP8 training**, **gradient checkpointing/offload**, and rank-64 LoRA across attention and MLP modules.

Technical Skills

Languages: Go, Python, SQL, Javascript
Backend: FastAPI, Django, REST API design, Microservices, Celery, Async & Event-driven workflows
Databases: PostgreSQL (schema design, query optimization, migrations), Redis (caching, queues), MySQL, MongoDB, Pinecone
Cloud & DevOps: AWS (ECS/Fargate, S3, Secrets Manager, CodeDeploy, Elastic Beanstalk, Rekognition), Azure, Docker, GitHub Actions, CI/CD, Linux
AI/ML Systems: multi-provider LLM/image API orchestration, LoRA fine-tuning (PyTorch), prompt-engineering tooling
Cloud & DevOps: AWS (ECS/Fargate, Elastic Beanstalk, CodeDeploy, S3, Secrets Manager, Rekognition), Azure, Docker, GitHub Actions, CI/CD
Reliability & Security:: JWT/OAuth, RBAC, idempotency, structured logging, observability (Grafana, New Relic), unit testing, Git workflows)

Education

Indian Institute of Information Technology, Nagpur Nagpur, India
B.Tech, Computer Science and Engineering *Dec. 2020 – Jun. 2024*

Achievements

- **IIT-JEE Advanced:** ranked in the **top 2%** of 1.2M+ candidates.
- **Competitive Programming:** LeetCode **1560** · Codeforces **1196** · 700+ problems solved.
